VISHNU KUMAR G K

Software Developer · Full Stack | Docker | CI/CD | AWS

+91 6369010443 | vishi08vishnu@gmail.com | LinkedIn: vishnu081 | GitHub: Vishi-vishnu

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Tailwind CSS, Responsive Design, Angular(familiar), C

Backend & APIs: Django, Django REST Framework, REST APIs Development, JWT, RBAC, Webhooks, API Rate Limiting, PostgreSQL, Redis, Celery, Firebase

Cloud & DevOps: Docker, Docker Compose, Multi-Stage Builds, GitHub Actions, CI/CD Pipelines, GHCR, Nginx, AWS (EC2, S3, IAM, CloudWatch – Logs, Alarms, Dashboards), Kubernetes (Basics), Terraform (Basics), Vercel, Linux

Tools: Git & GitHub (Branching Strategies, Pull Requests, Code Reviews), Postman, Jira, VS Code

Concepts: SDLC, Agile, Scrum, OOP, DBMS, DSA (Basic), C Programming

WORK EXPERIENCE

Software Developer | Inthera Consulting Group — ***Sep 2025 - Present***

Contract · Remote — *Regina, Canada*

- Contributed to **Inflow, a multi-tenant SaaS platform** across **projects, tasks, support tickets and time tracking**, building responsive frontend modules in **React.js, TypeScript, HTML5, CSS3 and Bootstrap** and connecting them to **Django REST Framework** APIs.
- Developed backend features in **Python, Django and DRF** across models, serializers, views, middleware and API endpoints, including **task dependency management** with circular dependency checks and workspace isolation tests.
- Worked on **workspace-scoped authentication and authorization**, including **JWT**-based sessions, **role and permission checks** and API-key scopes, helping centralize scattered hardcoded role checks into a permission catalogue while preserving existing access behaviour.
- Built integration features: **hashed API-key authentication** with scopes, **plan-based rate limiting** (30, 150 and 300 requests per minute by tier) using Redis-backed DRF throttling, gaining hands-on experience in **secure, scalable API development** and tier-based access control.
- **Containerised development environments** using **Docker and Docker Compose** across **Django, PostgreSQL and Redis** services, **handling migrations, container health checks, and environment config,** with changes through a GitHub Actions CI/CD pipeline.
- Tested and debugged REST APIs with **Postman and automated tests**, validating authentication, API responses, permissions and database workflows; added **React.lazy code splitting** for 14 routes, cutting about 800 KB from the first load.
- Delivered multiple **client-facing, business-ready websites** with **responsive UI, SEO optimization, reusable components and workflow automation**, collaborating through **Git/GitHub pull requests, code reviews and CI/CD workflows**.

PROJECTS

Dockerized CI/CD Pipeline | Docker, GitHub Actions, AWS EC2, Docker Hub — ***2026***

- Built a **GitHub Actions pipeline** that lints and tests the app, builds a **multi-stage Docker image**, pushes it to Docker Hub tagged with the commit SHA and deploys it to an **AWS EC2** instance over SSH on every push to main.
- Kept images small and builds fast with multi-stage builds and **layer caching**, stored credentials in **GitHub Secrets**, and added a post-deploy **health check with automatic rollback** to the previous image tag if the new container fails.

College Project Registration Platform | React, TypeScript, Firebase, Docker, Kubernetes, Terraform — ***2026***

- Built a full-stack platform that runs the final-year project process for **students, guides and coordinators**: join-code teams, topic approval, **versioned PDF/PPT/image uploads across four review stages**, guide feedback and marks, and live progress tracking.
- Replaced a manual, email-based collection process with **real-time review dashboards** and threaded guide feedback, eliminating lost or duplicate entries; authorization enforced server-side with **Firestore security rules**.
- Set up **CI/CD in GitHub Actions** with lint, type checks, unit, security rules, and **Playwright end-to-end tests**, CodeQL scanning, a Docker image pushed to **GHCR**, a **Kubernetes** rollout test on kind, Terraform validation and post-deploy smoke tests.

Social Media Web App | React.js, TypeScript, Firebase

- Developed and deployed a real-time social media web app with **Google sign-in and sign-out** through **Firebase Authentication**, a **Firestore**-backed post dynamic feed, like and unlike actions, and a create-post form validated with **React Hook Form and Yup**.
- Architected a **component-driven React UI** with React Router pages and a navbar that changes with the user's login state, and set up **GitHub Actions** to deploy to **Firebase Hosting** with preview builds for pull requests.

Travel Booking Page | JavaScript, HTML5, CSS3

- Designed and built a **fully responsive landing page** from scratch with modern UI/UX, smooth animations and **optimised assets,** achieving a **30% faster load time** and consistent rendering across devices.

EDUCATION

B.E., Electronics and Communication Engineering | **K.L.N College of Engineering** — ***2021 - 2025***

CGPA: 7.79 | **Relevant Coursework:** Software Engineering, Web Development, DBMS, SDLC, DevOps

CERTIFICATIONS & LANGUAGES

Discover DevOps (Microsoft) | **AWS Cloud Practitioner Essentials** (AWS) | **Programming with JavaScript** (Meta, Coursera)
React.js Basics (Meta, Coursera) | **Web Development** (Open Weaver / ICT Academy)
Languages: English (Proficient) · Tamil · Sourastra
